

We want to do whatever we can to answer your questions and help you feel comfortable using what we feel is a great tool for managing your involvement at Genesis Church!

Is Genesis Network Secure?

Yes! Genesis Network (A Church Community Builder Product) uses the high grade 256-bit SSL encryption certificates for access to all user data and user logins, and processing financial transaction data. These enterprise-level certificates through Comodo Enterprise SSL provide assurance that your data is protected between our servers and your computer.

You control what information you make available to other users of Genesis Network. Defaults are set to allow people in groups you belong to and friends you specify to see basic contact info for you, but you have the ability to limit or fully restrict what you share with others through the online directory. So if you don't want *everyone* to know that you actually prefer Pepsi over Coke, no one needs to know.

How can I use Genesis Network?

You can:

- Give online and view giving history/statements
- Join a Connection Group
- Register for events like Baptisms, Camp or Leaders Edge
- Schedule and manage your availability to serve on ministry teams
- Request use of Genesis Facilities
- Communicate with others who are in your Connection Group

Who has access to Genesis Network?

Anyone who goes to Genesis Church can request to receive a login to Genesis Network. If your email address is in our church database, you will automatically receive an email with a link to activate your account and set your password.

In circumstances where someone is misusing the online community, the church staff may restrict or block access to Genesis Network. We're committed to making this a safe, effective tool for our church to use!

Why isn't Steve Wallen in the staff photo?

You'll have to ask Steve about that. Supposedly he was sick that day.
